  - Zeki ÇELİK
- 

### Project Name and Description:

“beVeteran” is a hybrid mobile application with native APIs: camera, maps, GPS etc...

### Project Purpose/Goal(s):

- Main object of “beVeteran” is to work as a mobile application on smartphones.
- Users of the application will have an account.
- Account owners hide something at outside places and tag the place with couple of hints, other app users see these tags and if they want they can track the specific tags on map via GPS and should find what is hidden, also if users desired, they can load picture of what they have found and they can also write comments and hints for other users.
- Even though main intent for local people to have fun and adventure together, App Users can tag historical or popular places if they want for sightseer with different tag name.

### Approach:

- As VeteranTeam, we will approach to project process via Agile Software Development methods.
- We will work on frameworks like (?) on Windows systems.

**Timeline / Milestones:**

- Proposals: Feb 16th, 2nd week Thursday
- Initial sketches / wireframes from Feb 16th to Feb 23rd, 3rd week Thursday
- First demos From Feb 23rd to March 12th, 5th week Sunday
- Final demos From March 12th to March 26rd, 7th week Sunday

***TO BE CONTINUED... :D***
